

1:30 PM SUNDAY

8:15 AM MONDAY

In an ever growing population where energy becomes increasing rare the BMW iC2 creates a new form of vehicle stripped to its pure essence providing maximum function will still maintaining luxury and driving pleasure. By merging bmw's existing vehicle architectures the concept links two personal vehicles together to make a multi passenger platform offering the performance and practicality of a Z4 at the weekend then the mobility, agility and economy of 2 BMW motorbikes during the working week.

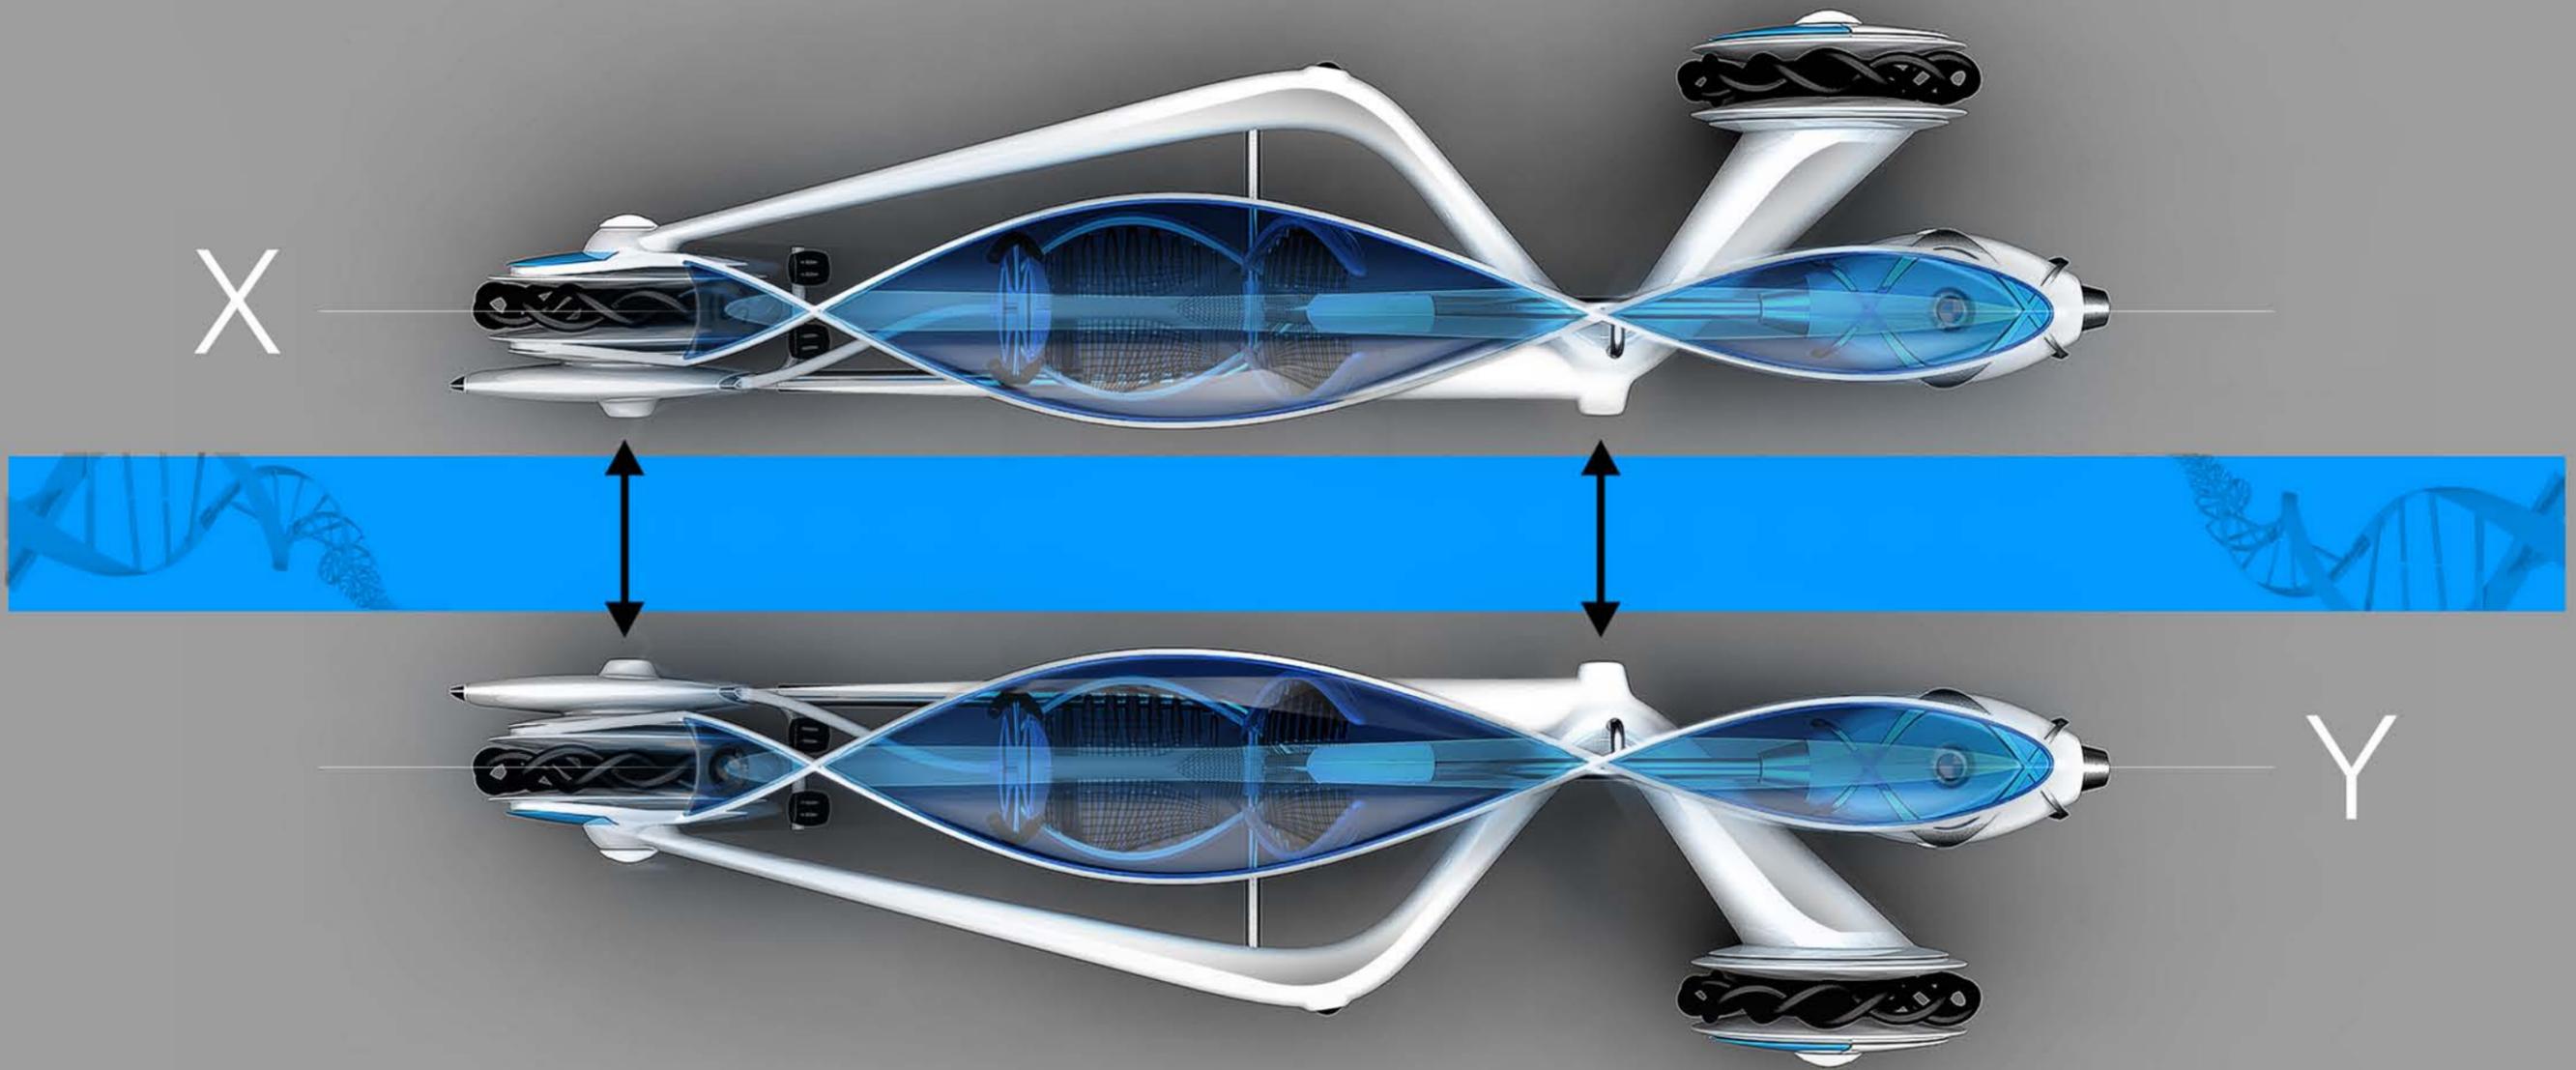

HUD

While Urban areas across the world invest in improved public transport to move the masses around their cities in an environmentally way, there will always be a class of individuals who will require luxury away from these services. Inspired by DNA the IC2 is made up of two components vehicle X and vehicle Y. These two mirrored electric bikes can be attached together to form vehicle Z allowing the users a flexible platform to cope with all the motions of a modern day lifestyle.

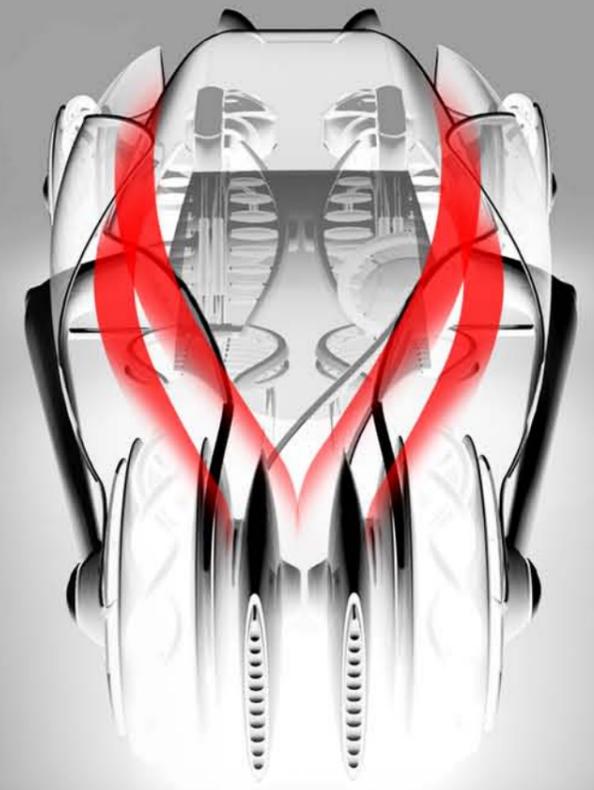

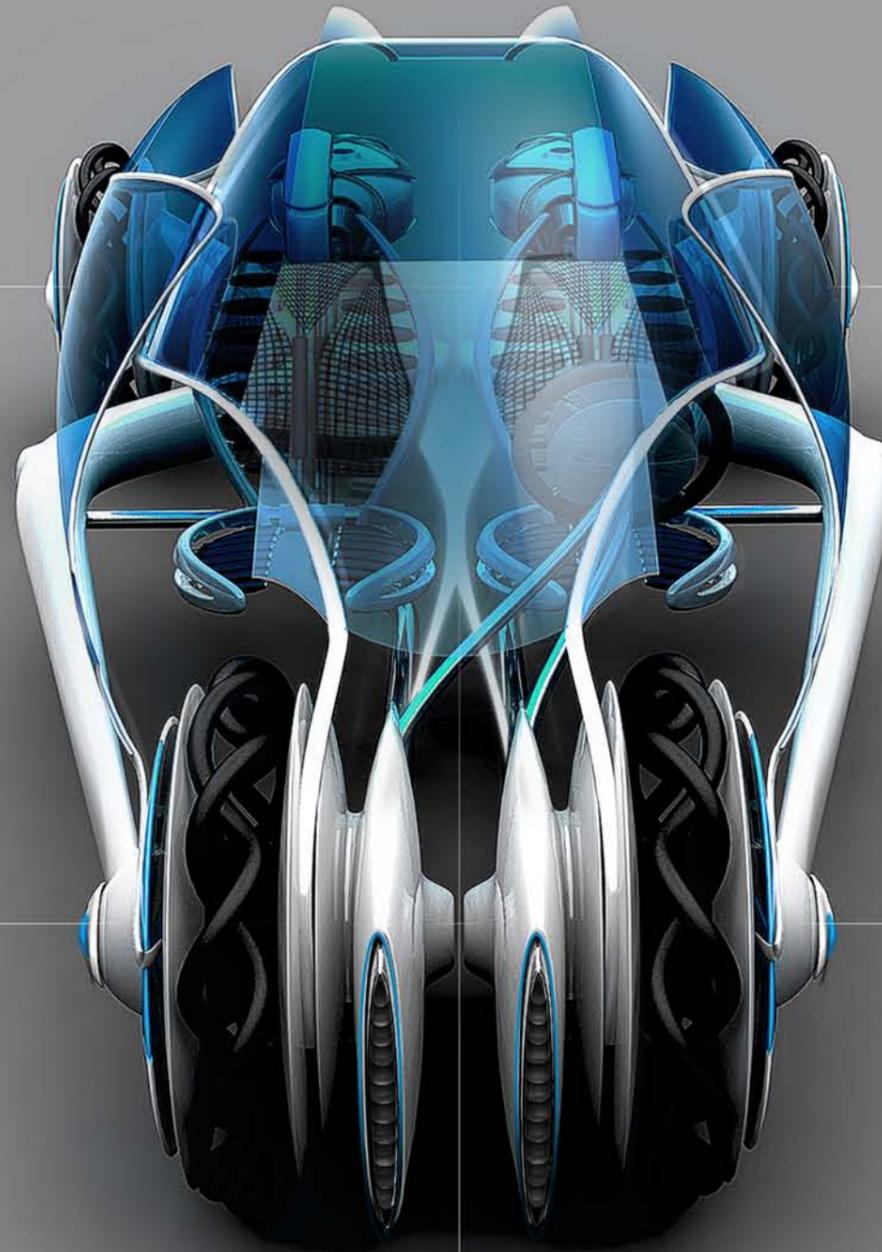

When units X and Y are connected together the glass canopies and steering rotate around a central axis to make one control point and a unified roof.

Z

WARM AIR
PROTECTION
STREAM

The open negative space of the design is protected by jets of warm air that provide comfort and a lightweight ecological boundary between internal and external space.
