

Artificial intelligent van
to go around Bordeaux
Castles for wine tasting.

Ready for a new experience?

ENCAPSULATED EXPERIENCE

TAILOR MADE WINE TASTING

The "Encapsulated Experience" project is an indoor space where 4 people can enjoy a wine tasting and tour the wine castles. This offers them a breathtaking view of the vines, and a unique visit to the Bordeaux vineyards.

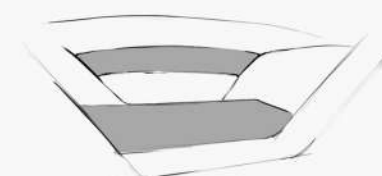

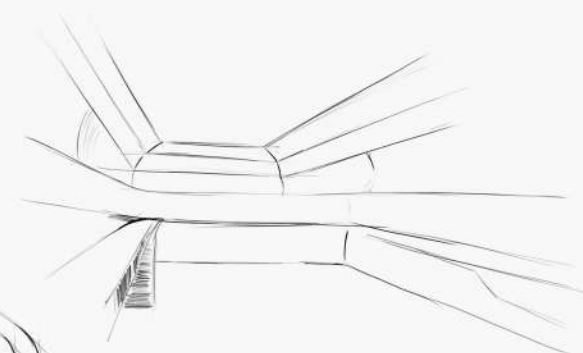

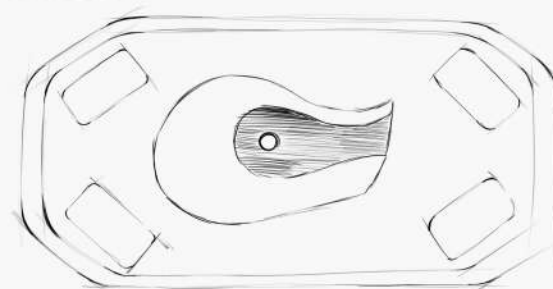

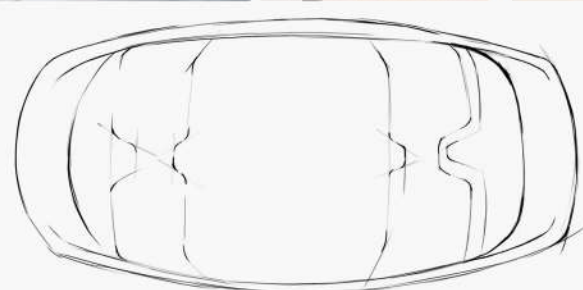

EXALTED WITH TIME

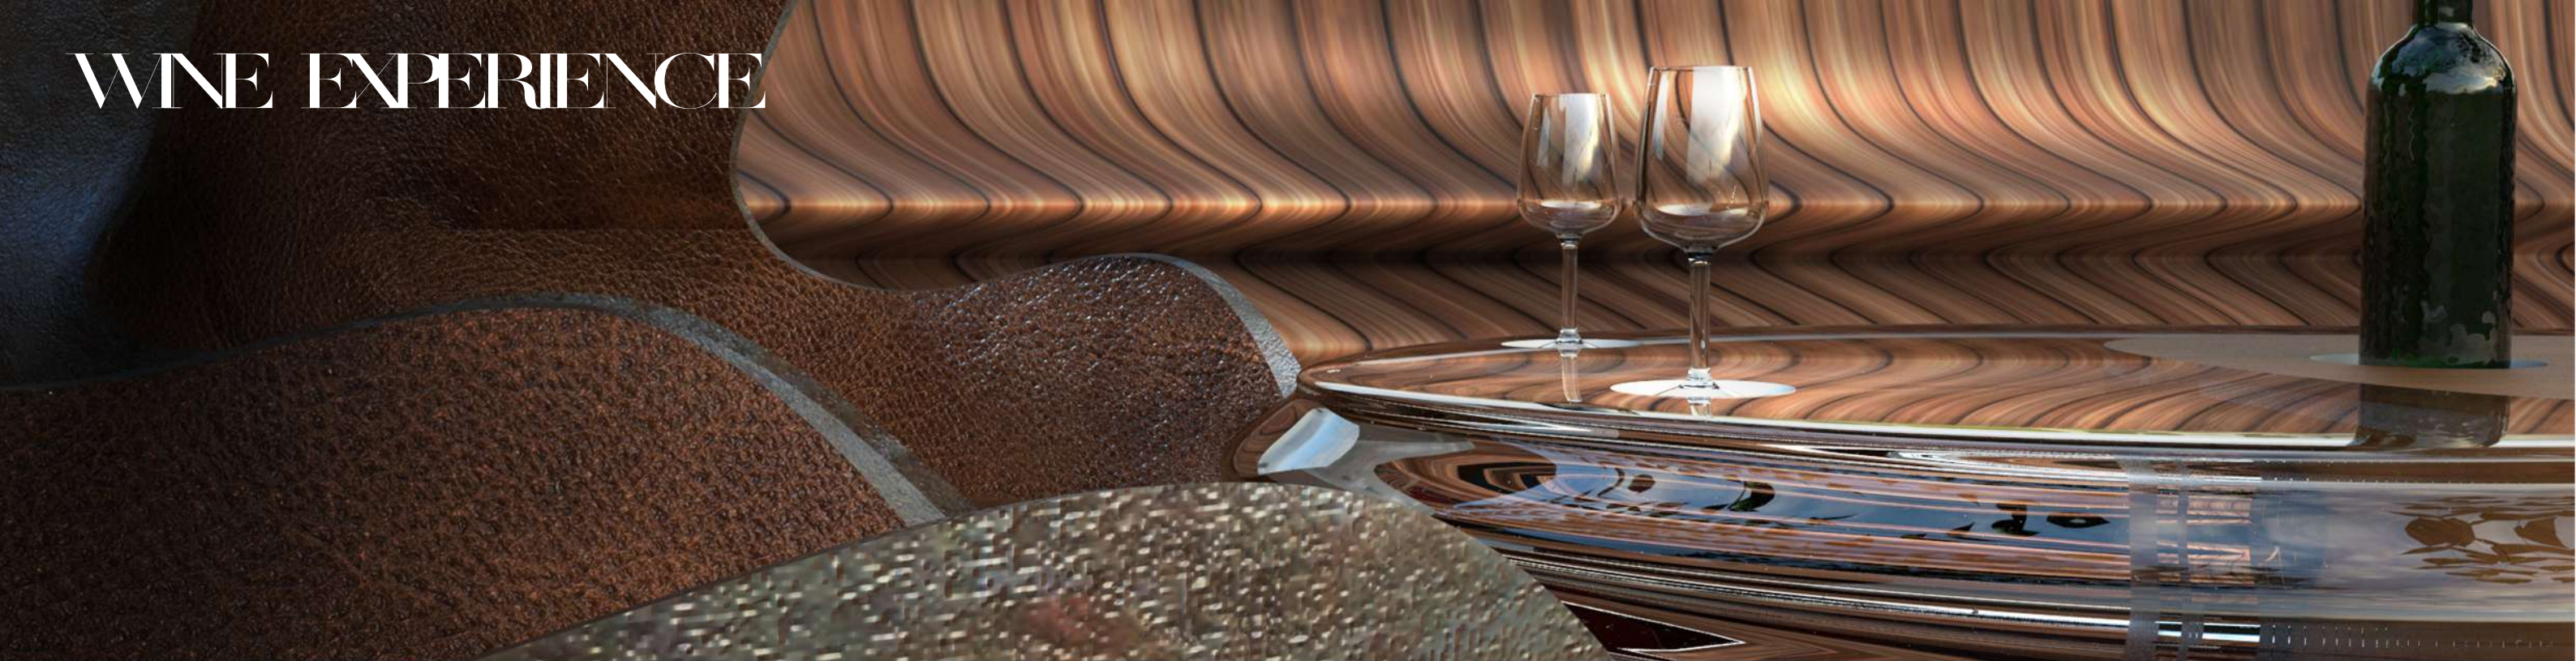

Wine is an alcoholic beverage that sublimates with time, it becomes more delicious.

The history of the vine and wine is so ancient that it blends with the history of humanity. Vines and wine have been an important element of societies, closely associated with their economies and cultures. Its existence is the result of a long and eventful history.

Some of the wines produced in the Bordeaux vineyards are among the most famous and expensive in the world, making Bordeaux a world reference.

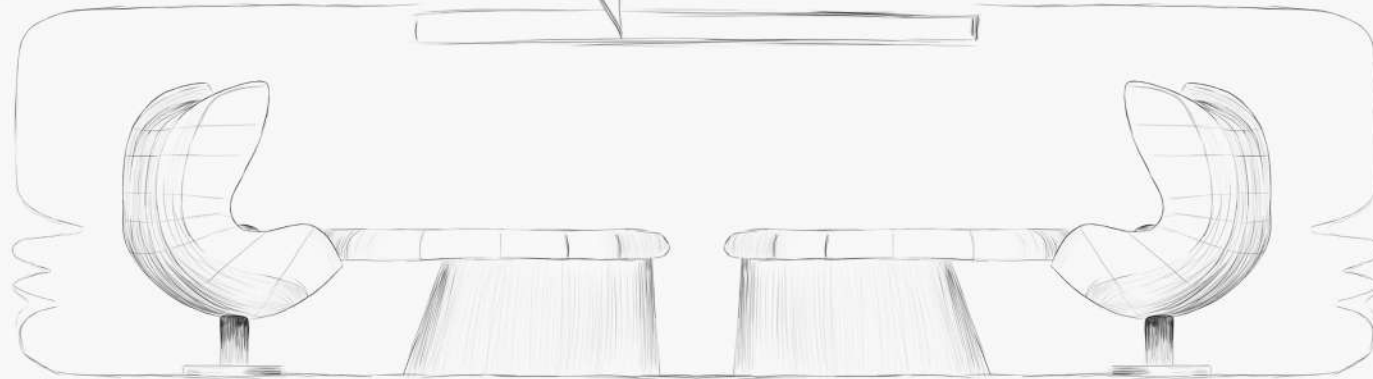

WINE EXPERIENCE

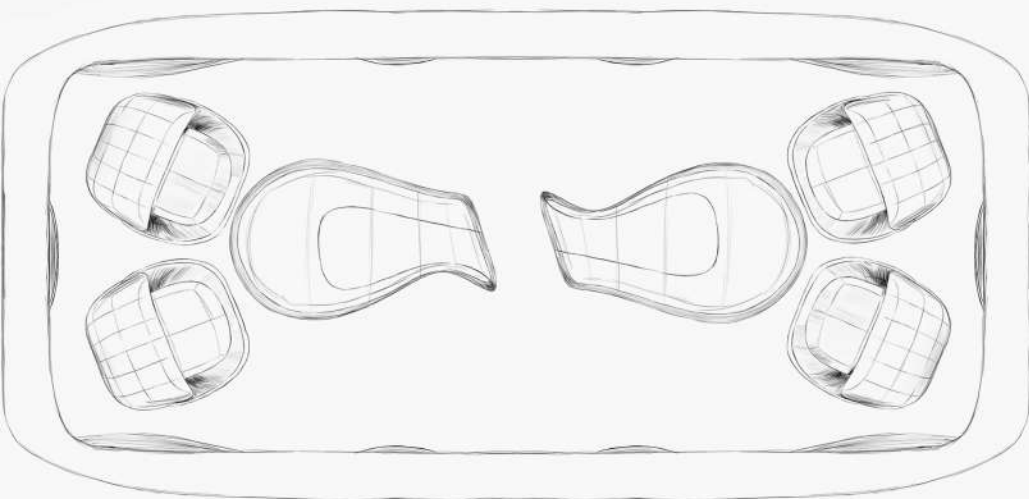

TERRARIUM

A terrarium containing small vineyards is located on the panoramic roof, allowing a few rays of sunlight to pass through to recreate a relaxing atmosphere.

WOOD WAVE

The walls of the vehicle are entirely made of wooden slats, in order to recall the material used for the barrels that contain the wine, and thus to recall the cooperage trade. They form waves, to remind us of the movement of the wine.

A DECANTER TABLE

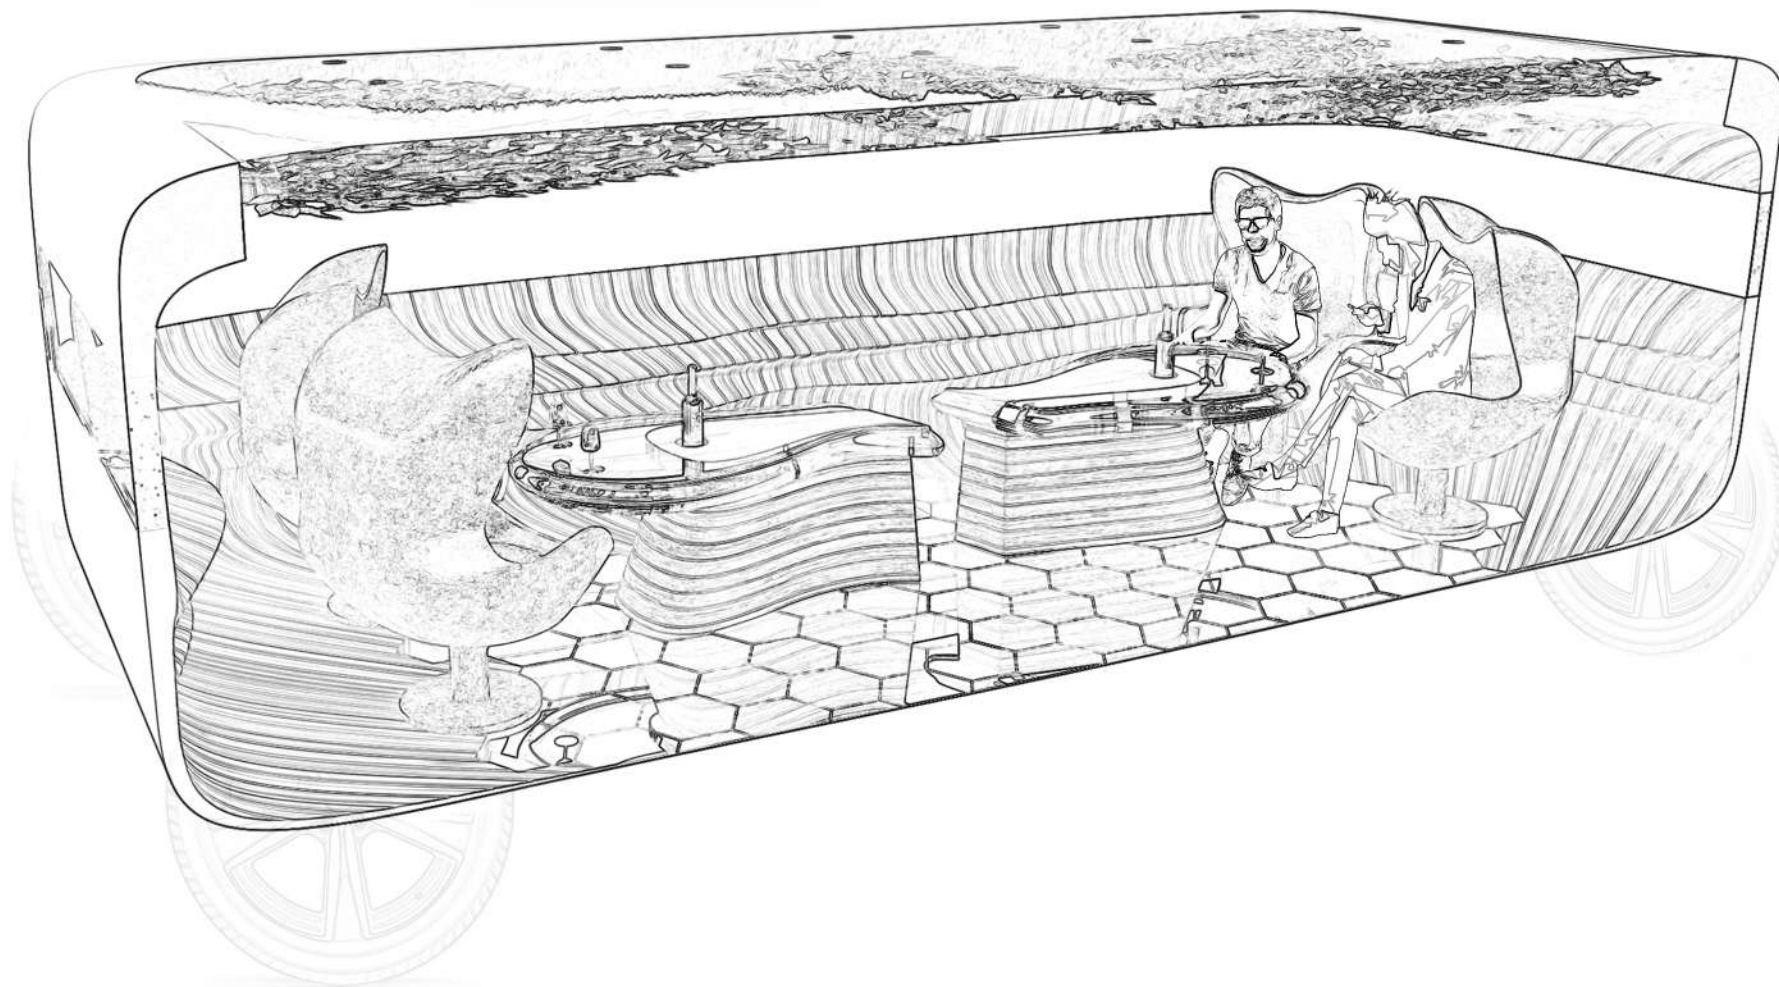

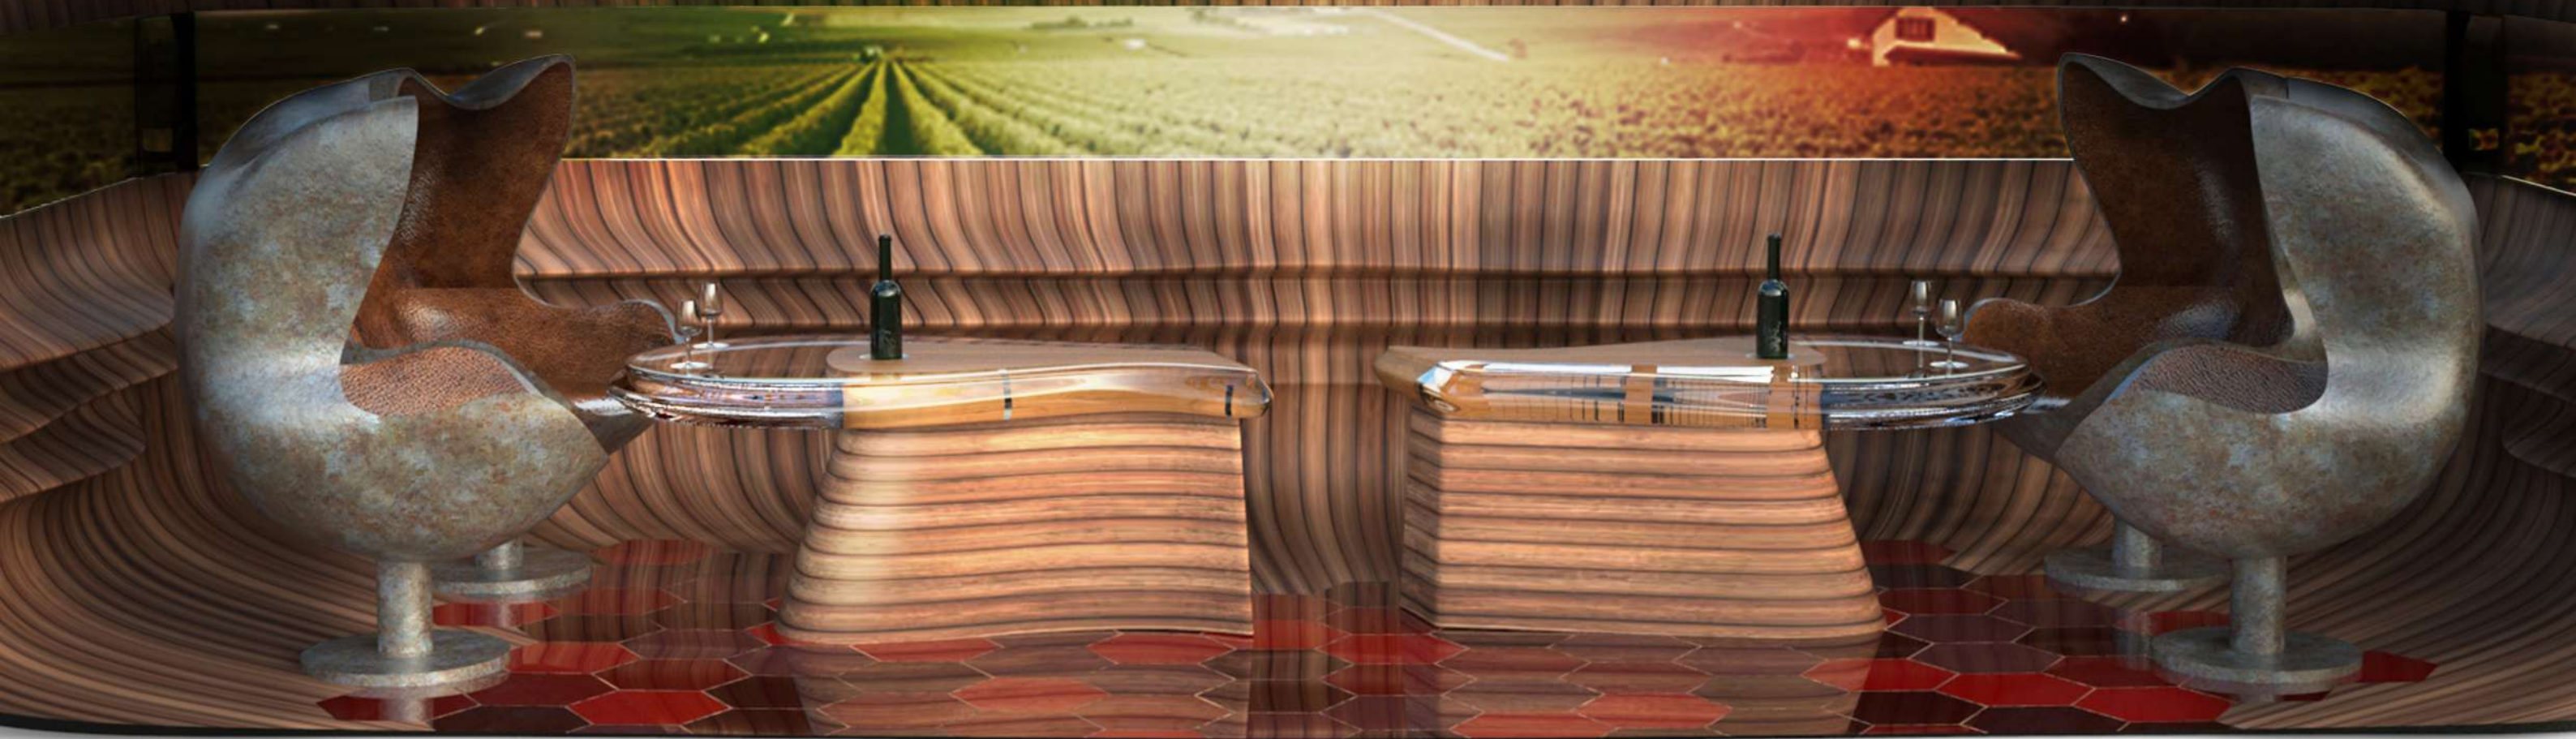

The table takes the shape of a decanter, which once again refers to the world of wine.

COCOON SEAT

The seat takes the form of a cocoon, so that the user can put himself in the position he wants while being isolated if he wants. The tasting experience is 100% lived.

A VAN FOR A TASTING MOMENT

The "Encapsulated experience" vehicle allows users to experience a very original tasting experience. The latter takes them to the various castles in the Bordeaux region to understand the process of creating this drink.
