

1/ **B R E A T H E** C O N C E P T

BREATHE is a concept of small electric car made for after-covid period. This small and extremely light single seater will drive you in all your daily routine in a new way of reaching fresh air and freedom! Four wheels and a steering wheel, it's all you need to make your day after a long home-office working day.

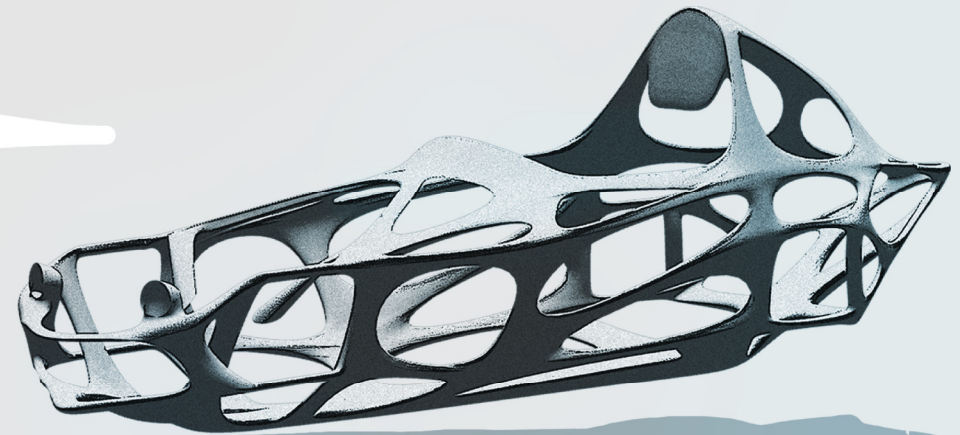

2/ STRUCTURE

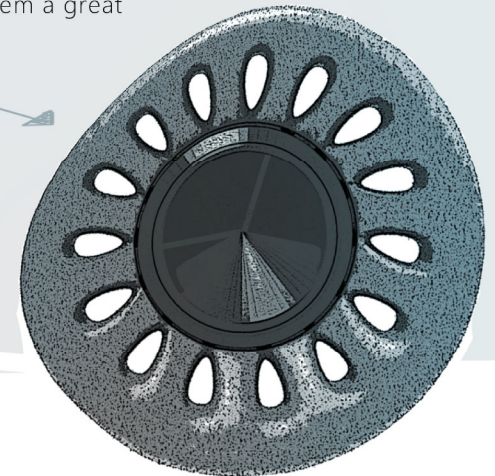

The structure of BREATHE is inspired by a bird skeleton and frame of old race cars. This shape allows it to be very agile and efficient on the road.

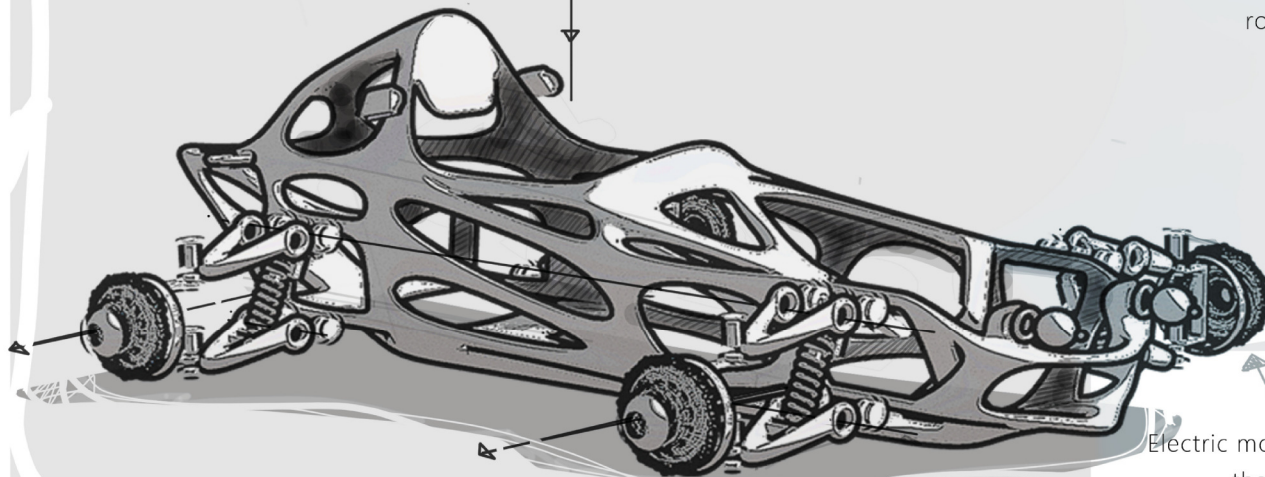

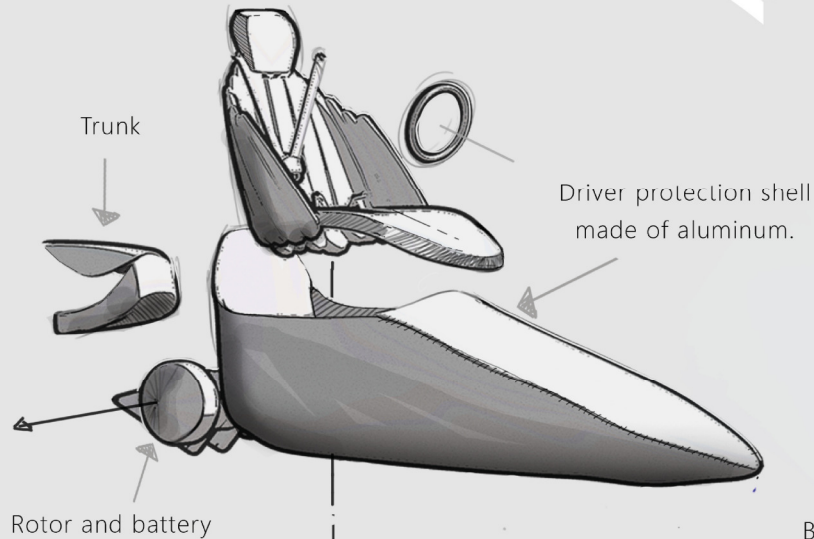

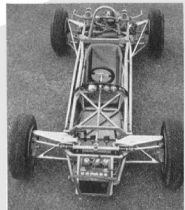

This tubular chassis is printed in one piece in carbon fiber. This organic structure makes it very strong but above all very light.

BREATHE is equipped with airless tires. These tires are therefore puncture-proof and the fact that they are made of composite materials gives them a great road holding.

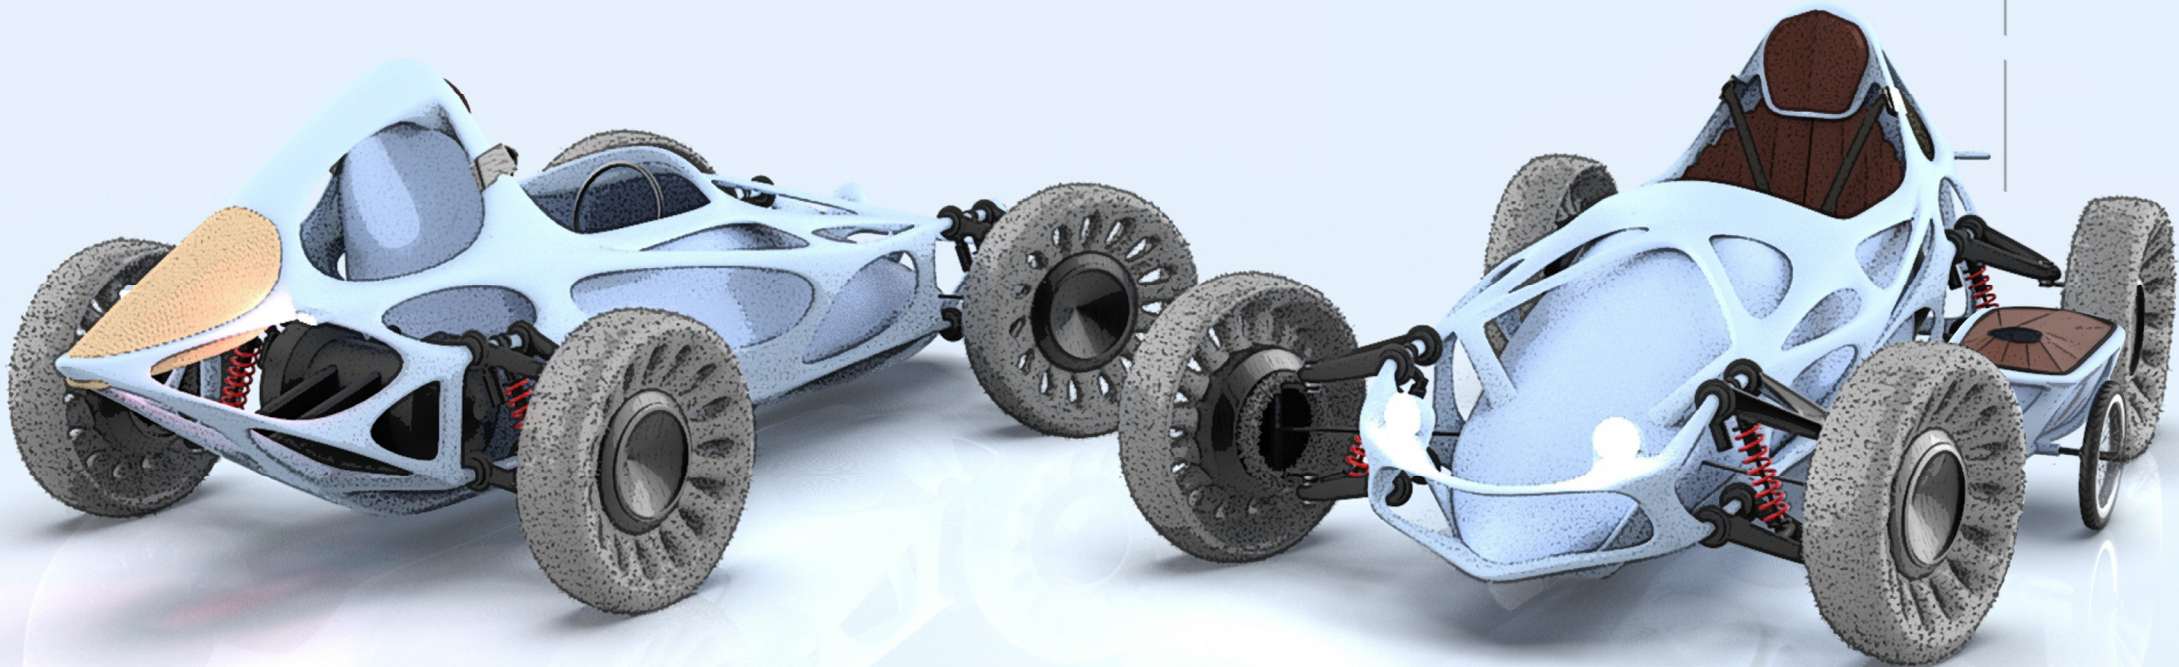

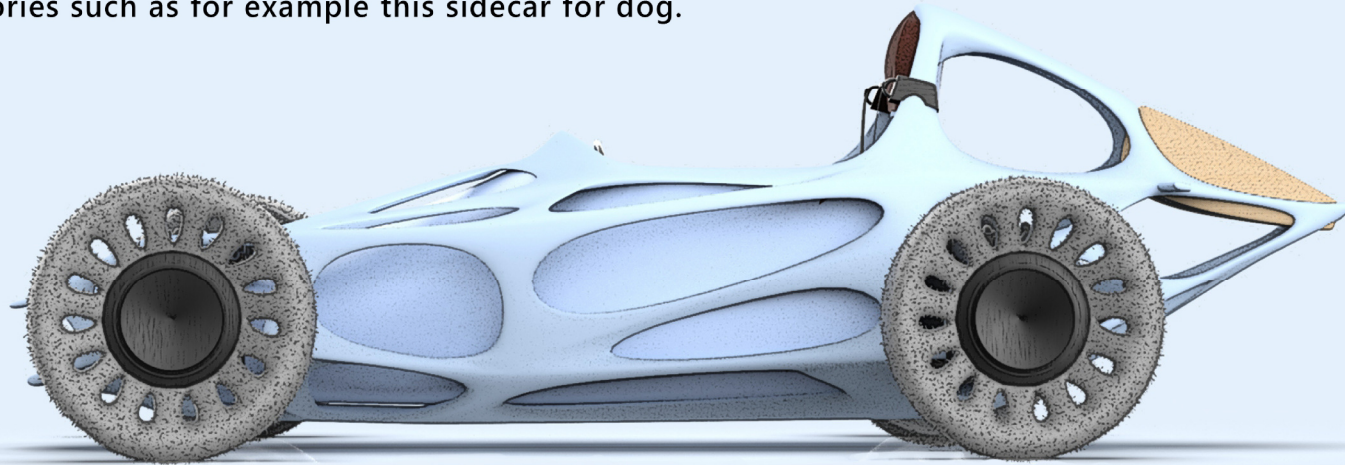

Electric motor HUB inside the wheels

3/ DESIGN

BREATHE can be declined in several colors according to the tastes of the customer. The owner can also choose different accessories such as for example this sidecar for dog.

4/ USER SCENARIO
